

Quantity Management

April 2019

Not all benefit plans include the Quantity Management program. Check your plan materials to see if this information applies to you.

What Is Quantity Management?

It's a quality and safety program that promotes the safe use of medications. The program limits the amount of some medications we cover. For most medications on the list, your plan will only cover a set amount within a set time frame.

We base the Quantity Management program limits on U.S. Food and Drug Administration and manufacturer dosing guidelines, medical literature, safety, accepted medical practice, appropriate use and benefit design.

Please note that many opioid pain medications are subject to quantity limits as part of a separate drug management program. For more information, please see the **Opioid Management Program** drug list available on your health plan's website.

What If My Doctor Says I Need More Than The Listed Quantity Limit?

Your plan will cover higher amounts of some medications when medically necessary. If your doctor thinks you need more than the amount allowed by your plan, he or she can request an override. These requests either go to CVS Caremark (page 2) or to your health plan (pages 3-5) for review. Specialty drug quantity overrides (pages 6-8) go to Caremark Specialty for review. CVS Caremark is an independent company that provides pharmacy management services on behalf of your health plan.

What Happens at the Pharmacy?

The pharmacist enters your prescription information into the computer system. If the drug has a limit on the covered amount, the pharmacist will fill your prescription, as long as it does not exceed the limit. If your prescription exceeds the quantity limit, you have three choices:

- Your pharmacist can reduce your prescription to the quantity your health plan covers.
- You can pay full price for all of your prescription or for the portion that exceeds the limit.
- You or your pharmacist can ask your doctor to get a quantity override if one is available.

If your plan approves the additional quantity, it will pay for it. If your plan does not approve it, or the override is not available, you can still choose another option. You and your doctor make the final decision about the medication that is right for you.

If you submit your prescription to the mail-service pharmacy and (1) you do not meet the requirements for an override for an additional quantity, or (2) an override exception is not available for your drug, the pharmacy will not fill your prescription. It will return your prescription to you.
